Education

Bachelor of Computing, Software Engineering (Co-op)

Sept 2024 – Expected Apr 2029

University of Guelph

- Area of Emphasis: Artificial Intelligence

Work Experience

Web Applications Developer Co-op

Mississauga, ON / Hybrid

Kenna

May 2026 – Aug 2026

- Develop and maintain full-stack web applications for enterprise clients, delivering campaign sites, internal tools, and client-facing workflows used by **20,000+** active users across the U.S. and Canada.
- Rebuild and optimize application features using modern technologies, improving performance by **30%** and strengthening application security.
- Collaborate with developers, QA, designers, and stakeholders in an Agile environment using Git, Jira, code reviews, release testing, and CI/CD workflows to ship to production.

Projects

PosturePal

May 2026

React, Vite, Tailwind CSS, MediaPipe Pose, Firebase Auth, Firestore

github.com/hayamahmoudd/PosturePal

- Built a webcam-based posture coach using **MediaPipe** pose detection to score head position, shoulder alignment, and forward lean in real time.
- Added personal calibration, configurable thresholds, and smart alerts through banners, sound, and push notifications when posture drops below the user's baseline.
- Created session history, score trends, leaderboard, and friends functionality with **Firebase Auth** and **Firestore**.

Pray360

Jan 2026

TypeScript, React, MapTiler, Fastify, PostgreSQL, Docker

github.com/hayamahmoudd/Pray360

- Built a community driven platform for discovering and reviewing prayer spaces on an interactive map, using a **React** frontend and **Fastify REST API**.
- Designed a **PostgreSQL** database, containerized the backend with **Docker**, and built validated API endpoints with structured error handling.
- Awarded **3rd place** for Open Innovation.

ShelterMap Toronto

Nov 2025

Python, Next.js, React-Leaflet, Google Cloud, BigQuery

github.com/hayamahmoudd/ShelterMap

- Built a data-driven mapping tool that combines a **Python** data pipeline with a **Next.js/React** interface to identify high-priority shelter placement zones in the GTA.
- Used **BigQuery** to preprocess and join Toronto homelessness datasets, then deployed the project to **Google Cloud** with containerized services.

AI-Powered Career Finder App

Jul 2025 – Aug 2025

JavaScript, Node.js, REST API, Google Gemini API

github.com/hayamahmoudd/CareerFinderAI

- Built a career exploration tool with a **Node.js** backend and integrated the **Gemini 2.5 REST API** to generate structured career recommendations.
- Applied prompt engineering to return **2–3** career matches per query, improving response quality and usability.

Technical Skills

Languages: C, Python, JavaScript, Java, HTML/CSS, SQL, TypeScript

Libraries/Frameworks: React, Next.js, Node.js, Fastify, Vite, Tailwind CSS, Matplotlib, Pandas

Developer Tools: Docker, Git, Bash, AWS, Google Cloud Platform, Firebase, Jenkins, Jira, VS Code, Valgrind

Relevant Skills: REST APIs, Full-stack Development, Agile/Scrum, CI/CD, Unit Testing, OOP, Data Structures & Algorithms

Awards & Achievements

University of Guelph's CEPS Dean's Honours List (4x)

Sept 2024 – May 2026

- Recognized for achieving an average of **80%+** per semester.

NCWIT Aspirations in Computing Award

Apr 2024

- Awarded for excellence in CS, leadership, and extracurriculars in computing.
